| 10 <sup>th</sup> (CBSE)                   | Gayatri Public School          | 2018      | 77.6%     |

EXPERIENCE

National Informatics Center | Software Developer

October 2024 – Current

- Working as a **Frontend Developer** on the **eShram project**, a government initiative to support unorganized workers in India through social security and job opportunities.
- Built and designed the complete **UI** of the **Platform Worker Registration Portal** using **Angular18+ TypeScript, HTML5, and CSS3**, ensuring a user-friendly interface; as of March 3, 2025, over 30.68 crore unorganized workers have registered.
- Participated in **Manual Testing** and quality assurance for multiple modules under the eShram project, identifying bugs and contributing to overall product stability.
- Collaborated with the **Project Management Unit (PMU)** to develop and design the **Aggregator Registration Portal** using the same tech stack **TypeScript, HTML5, CSS3**, and allowing aggregators to register and manage worker data.
- Coordinated with the team and worked on Automation using **Selenium** and also made POC's using **Flutter**.

Impressico Business Solutions | Software Developer Intern

July 2024 - September 2024

- Worked as part of a team to **design and develop a "Travel Planner" application** powered by **Generative AI**, aimed at delivering personalized travel itineraries based on user preferences. Additionally, I developed the **UI of a real-world project** using **React.js**, to build responsive and user-friendly components.
- Received hands-on training in **Generative AI (GenAI), AWS, Kubernetes, Docker, Python, Pandas**, and **React.js** during the internship program.
- Delivered multiple **presentations and knowledge-sharing sessions** to peers and newly joined interns, reinforcing topics learned.

Aerial Delivery Research and Development Establishment (ADRDE)  
DRDO | Web Development Intern

Jan 2021 - March 2021

- Built real-time weather dashboard with APIs using HTML, CSS, JavaScript.
- Integrated frontend with PHP & MySQL backend.

PROJECT

Final Year Academic Project | Python, OpenCV, MediaPipe, HTML, CSS |

- Virtual Mouse using Hand Gestures | Python, OpenCV, MediaPipe.
- Real-time gesture recognition to control mouse without hardware.

TECHNICAL SKILLS

- Frontend:** React.js, Angular18+, TypeScript, HTML5, CSS3, JavaScript, Flutter.
- Backend:** Node.js, Express.js.
- Programming:** Python

CERTIFICATIONS

- Full Stack Web Development Bootcamp**
- Python for Data Science and Machine Learning Bootcamp**
